Challenging Old Order

Towards New Directions in Traffic Safety Theory

J. Peter Rothe, editor

With a preface

by Patricia J. Waller

This book is the result of a week-long discourse in which internationally renowned scholars presented informed points of view that have not previously been topical in traffic-related research. Their arguments were debated and critiqued by practitioners, researchers, political officials, and other members of the traffic safety community. The result of this unusual approach is a state-of-the-art volume of fundamental importance to policymakers concerned with traffic safety issues.

Speaking Truth to Power

Aaron Wildavsky

One of the foremost experts in public policy here attempts not only to describe what public policy is, but given societal changes to account for its present status.

Social Policy and Public Policy

Inequality and Justice

Lee Rainwater, editor

This classic volume was originally designed as an introduction to social science perspectives on a broad range of social issues in American society, specifically the complex social problems of the 1960s. Because the volume is structured as a survey, it is neither exhaustive or definitive. It does provide a wide range of information about these problems, as well as the many different policy initiatives that were developed to cope with them. Readers can learn a great deal about the common themes, predilections and quandaries that characterized United States responses to the complex problems of the 1960s and the patterns of inequality and injustice prevalent at that time.

Searching for Science Policy

Jonathan B. Imber, editor

The findings of scientific research often provide an important baseline to the formation of public policy. This book offers innovative ways of thinking about how the rhetoric and practice of science operates in various institutional contexts. In a time when scientists find themselves subject to more public scrutiny than ever before, the well-informed citizen is no longer a moral ideal, but rather a social imperative. This book helps to clarify the grounds and the circumstances of more effective use of science in public discourse.

Going by the Book

The Problem of Regulatory Unreasonableness

Robert A. Kagan and Eugene Bardach

With a new introduction by the authors

Going by the Book simultaneously illustrates the virtues of flexible regulatory enforcement and illuminates the political and practical obstacles to achieving that goal. In their new introduction, the authors discuss their findings in light of the twenty years that have passed since *Going by the Book* was first published. They explore the growth of regulation in recent years as well as many reforms, noting that while much has changed, much has not.

Peddling Panaceas eBook

Popular Economists in the New Deal Era

Gary Dean Best

As the Great Depression dragged on without a recovery, Americans were avid for anything that would help them to understand its causes and possible solutions. During this period, orthodox economists were largely discredited, both in the White House and among the public. Three of the most popular and influential figures of the period—Edward A. Rumely, Stuart Chase, and David Cushman Coyle—were not trained in economics. In *Peddling Panaceas*, Gary Dean Best analyzes their remedies for the Depression, their proposals for permanent economic reform, and their influence.

American Economic Policy from the Revolution to the New Deal

William Letwin, editor

The documents in this volume reflect the great debates that have shaped this country's economic life. Covering a wide variety of problems, they show how each was treated at a moment when it was politically urgent. Since they were efforts at persuasion, usually addressed to a wide audience, they are coherent, self-contained and avoid technical jargon. They therefore present clear and vivid evidence of what men have desired and hoped to achieve, and explain not only much that is critical about how Americans lived in the past but much also about the inheritance of the present.

Frames of Justice

Implications for Social Policy

Leroy H. Pelton

"Frames of Justice is a lucid and timely book. Establishing social justice with respect to three religious texts—the Bible, the Tanakh, and the Koran—Pelton examines the most vexing domestic and international issues of the day. At a time when sectarian values have become ascendant in public policy, this book is indispensable for understanding the origin of past conflicts and the impediments to their resolution."

Humane Politics and Methods of Inquiry

**Ithiel de Sola Pool and
Lloyd S. Etheredge, editors**

Ithiel de Sola Pool was a distinguished scholar of the political process, and one of the most original thinkers in the development of an integrated social science. This volume focuses upon his contributions to the development of research methods that deepen our understanding of human behavior. The book is divided into five parts treating the analysis of communications, computer simulation, forecasting, network theory, and the social sciences in political contexts.

Survey Research in the United States

Roots and Emergence 1890-1960

Jean M. Converse
*With a new introduction

Science and Technology Advice to the President

To the President, Congress and Judiciary, *Second Edition*

William T. Golden, editor

This volume aims to attract attention to the necessity for quality advice on science and technology issues to the president of the United States, to Congress, and to the judiciary. It emphasizes reconsideration and improvement of existing organizations and mechanisms, mindful of the need to adapt to changing circumstances. Golden has gathered facts and opinions useful to a wide range of people: government officials and staffs in all three branches; journalists; scholars and students of political science, science policy, and the history of science policy; members of the industrial and financial communities; and the concerned citizenry.

Knowledge and Public Policy

The Search for Meaningful Indicators, *Second Expanded Edition*

Judith Eleanor Innes

Knowledge and Public Policy addresses the question of what it takes to develop social indicators that genuinely influence important public decision. Innes contends that to understand how knowledge and policy are linked, we need to replace the "scientific" model of explicit knowledge use with a more inclusive, interactive model of knowledge influence. To do this we must rethink both the education and practice of policy professionals.

The Revolt Against the Masses

And Other Essays on Politics and Public Policy

Aaron Wildavsky
*With a new introduction
by Irving Louis Horowitz*

In his new introduction, Irving Louis Horowitz examines what has changed and what continues to be salient in Wildavsky's line of analysis. Essentially, the report card on *The Revolt Against the Masses* is that the situation described in these

essays has changed somewhat in style but hardly at all in substance. The nuclear shield replaces the ABM treaty, and Afghanistan replaces Vietnam as the center of political gravity—but the same coalition of forces across party and economy still dominate the American political process. The justifiably famous essay on "The Two Presidencies" shows how persistent is the gap between the conflict over domestic priorities and the consensus on foreign policy—and why. This is, in short, a classic text that continues to merit careful study by all those interested in political life.

Science and Ideology in the Policy Sciences

Paul Diesing
*With a new introduction
by Richard Hartwig*

The purpose of this book is to examine how ideology operates—in the sense of influencing the conduct of inquiry—in the policy sciences defined as economics, political science, and sociology. The author seeks to identify the main ideologies and show how each ideology produces a preference for certain problems, methods, and hypotheses; how it sensitizes scientists to certain phenomena and suggests certain interpretations of those phenomena; and how it closes off other phenomena and concepts from investigation and testing, or at least distorts that investigation.

Dysfunctions of the Welfare State

New in Paperback

Joel Clarke Gibbons

Economics is the science of the creation and exchange of value, but the gross domestic product (GDP) confuses value with the creation and exchange of "goods and services." Along the way, GDP has become a measure not of value created, but of effort expended and of costs incurred. This confusion has become the cornerstone of policy manipulation of "the economy," because it is very easy to incur costs, though not so easy to create value. Policymakers are not eager to correct this discrepancy because it is easier to manufacture costs through brute force than to produce results that have real value. This book pins down the major contributors to these distortions in a number of specific areas, including education, science and engineering, hospitals and other medical facilities, the public utility transmission grids, and in the trade deficit.

The Limits of Government

Policy Competence and Economic Growth

Gunnar Eliasson and Nils Karlson, editors

The anthology contains selected papers presented at the Sixth Conference of the International Joseph A. Schumpeter Society in Stockholm. It is remarkably current, including essays on Microsoft versus Netscape; Russia's Agrarian Dilemma; the Expanding Public Sector; and a contribution to fundamental economic policy analysis concerning prospects for democratic capitalism. The volume is serious, concrete, and rich in statistical data of present-day worth and empirical research of larger theoretical value.

Social Science Information and Public Policy Making

Robert Rich

With an introduction by the author

A survey of federal officials reveals the belief that government should make the fullest possible use of social science information—yet most of the information developed by social scientists winds up in specialized libraries or data banks, where it remains unused. Why don't public officials make greater use of the information social scientists develop? What can social scientists do to ensure that their findings are used? To answer these and related questions, Robert Rich reports the results of a unique experiment designed to facilitate the use of research data by public officials in federal agencies.

Rush to Policy

Using Analytic Techniques in Public Sector Decision Making

Peter W. House and Roger D. Shull

Rush to Policy is written by two practicing federal policy analysts who, in a decade of service as policy researchers, developed sophisticated quantitative analytic and decision-making techniques. They then spent several years trying to use them in the real world. Successes and failures are described in illuminating detail, providing insight not commonly found in such critiques. The authors delineate the interaction of politics and technical issues, describing policy analysis as it is, not how it ought to be.

Understanding Policy Fiascoes

Mark Bovens and Paul t'Hart

Understanding Policy Fiascoes applies policy analysis to come to terms with policy fiascoes, with a full appreciation of its limits. Despite the fact that policy failures may seem universal, they are in fact better understood as social, political and academic constructions. Bovens and t'Hart trace how and why certain episodes of public policymaking become labeled as "fiascoes." They highlight the analytical and political biases that shape our judgments of policy outcomes and the performance of policymakers and institutions.

The Competition of Ideas

eBook

New in Paperback

Murray Weidenbaum

The Competition of Ideas is a fair-minded and well-informed comparative assessment of a vital but oft-misunderstood Washington institution, the major public policy think tanks. The book offers a perceptive and cogent explanation of the internal workings, intricate inter-relationships, finances, and effectiveness of five key private research and advocacy centers that span the political spectrum...

—Thomas D. Hopkins, professor of economics, Rochester Institute of Technology
Murray Weidenbaum, an independent participant observer of various Washington think tanks, presents a careful, balanced account of where think tanks have been and are now headed in *The Competition of Ideas*. Weidenbaum discovered that think tank staffers are mostly activists and scholars; that they are not made up of totally conservative or totally liberal members, and that they do make a special contribution to public policy. He believes that the overarching issue of quality control deserves more attention than it has attained in the think tank world.

WORLD BANK EVALUATION AND DEVELOPMENT Gregory K. Ingram and Osvaldo N. Feinstein, Series Editors

Volume 8

Evaluating Climate Change and Development

Osvaldo Feinstein and Rob D. van den Berg, editors

To address climate change and development issues from the perspective of evaluation, an international conference was held in Alexandria, Egypt. This book distills the essence of that timely conference, building on the experiences of more than 400 reports and studies presented. It deals with climate change, development, and evaluation; challenges and lessons learned from evaluations; mitigation of climate change; adaptation to climate change; vulnerability, risks and climate change; and presents a concluding chapter on the road ahead. Collectively the authors offer a set of approaches and techniques for the monitoring and evaluation of climate change.

Managing a Global Resource

Challenges of Forest Conservation and Development

Uma J. Lele, editor

This volume makes it clear that without substantial international financial transfers and knowledge of appropriate, location-specific solutions, much of the world's tropical forests will be lost. Even with substantial financial resources the prospects for conservation depend on a complex and dynamic set of country-specific factors. *Managing a Global Resource* offers unusually rich insights into the global/national interactions and lessons for future strategies. It will be of interest to conservationists and environmentalists concerned with the future of conservation in a changing environment.

Public Policy in a New Key

Amitai Etzioni

Public Policy in a New Key is an important contribution by a major social analyst on some of the most crucial policy questions of our time. These writings, which range widely over the spectrum of domestic and foreign policy questions are linked by a broadly conceived vision of sociological method that acts as a universal key to many social issues.

Monetary Policy and Macroeconomic Stabilization

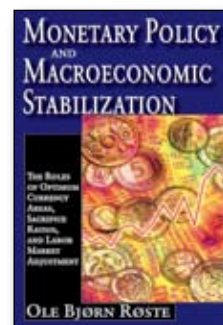

The Roles of Optimum Currency Areas, Sacrifice Ratios, and Labor Market Adjustment

Ole Bjørn Røste

As a fundamental review and critique of activist economic policies, this book is a unique contribution to classical political economy. It covers macro-economic stabilization policy, with emphasis on the value of a distinct national monetary policy to growth. Ole Bjørn Røste's argument is for public officials to restrain themselves in the pursuit of policy. As the author notes: when you know less, you should do less.

Budgeting and Governing

Brendon Swedlow, editor

*With an introduction
by Joseph White*

Budgeting and Governing gathers in one place a mass of material that otherwise would be lost in a wilderness of journals and edited volumes. They are organized largely chronologically so that the reader can trace the progression of Wildavsky's thought.

AARON WILDAVSKY

Budgeting

A Comparative Theory of Budgeting Processes, *Revised Edition*

In dealing directly with the universe of governmental activity, Wildavsky uses reliable accounts of how budgeting captures a great deal of national political life. After developing a general theory of budgeting; he analyzes four rich countries—Britain, France, Japan, and the United States, followed by poor countries, American cities, and American states. Wildavsky uses this analysis to develop and apply a cultural theory of budgeting, explaining the degree of balance between revenue and expenditure; why government grows in all industrial democracies, and why there are still different rates of growth in spending. He offers a critical evaluation of the first edition; linking the ability of nations to make history and the various strategies of change they adopt to explain a wider range of budgetary processes.

Budgeting, Policy, Politics

An Appreciation of
Aaron Wildavsky

Naomi Caiden and Joseph White, editors

Aaron Wildavsky was one of the most innovative and prolific scholars in the field of budgeting in our time. His work spanned a period of more than forty years, and its perspectives encompassed not only budgeting in the United States, but also its comparative and historical dimensions. As a leading political scientist, his research also ranged into American political institutions, public policy analysis, leadership, and biblical studies. This book pays tribute to Wildavsky by explicating his life and work, with emphasis on his contributions to the field of public budgeting and finance.

Learning Lessons

NEW

Medicine, Economics,
and Public Policy

Rashi Fein

Learning Lessons is a book about the policy process. It discusses the considerations advisers have in mind as they develop and select policy alternatives, the ways each of us might want to think about making decisions, and the lessons we should

remember in order to minimize avoidable errors. In writing about his experiences in government, the classroom, and private life, Fein offers insights that apply to people responsible for decisions in many kinds of institutions, at all levels of responsibility.

Cost-Benefit Analysis

With Reference to Environment
and Ecology

K. Puttaswamaiah

The Social-Cost Benefit Analysis (SCBA) is an important technique used in formulating, appraising, and evaluating projects. It is a facet of applied welfare economics that is used to identify and assess public projects. This volume presents a comprehensive view of cost benefit analysis in its theoretical and applied dimensions. Both theory and case studies are presented.

Lotteries

Alan J. Karcher

Karcher examines lotteries from a historical, psychological, and philosophical perspective, and offers a cogent explanation of their popularity. He looks at the popularity of state-sponsored gambling and the consequent peaking of revenues, exposing the measures lottery commissions sometimes take in order to increase revenues. Self policed lottery commissions, he predicts, will resort to marketing abuses and increasingly prey upon the poor if they are given unbridled power to act.

Earth Capitalism

NEW

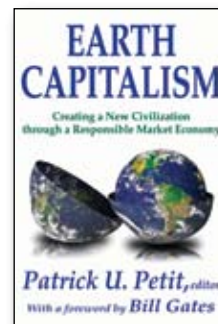

Creating a New Civilization through
a Responsible Market Economy

Patrick U. Petit, editor

With a foreword by Bill Gates

The current global economic crisis impels us to create a responsible capitalism, one that benefits all living beings on this planet. It reminds us to live a simpler life based on true well-being and life-satisfaction, but simple living is not about living in poverty. As its subtitle suggests, *Earth Capitalism's* contributors present leading edge economic concepts, business models, and best practices that show the path toward creation of responsible capitalism—a viable scenario emerging from the current global economic and financial crisis.

LEWIS D. SOLOMON

Tech Billionaires

Reshaping Philanthropy in a Quest for a Better World

Tech Billionaires analyzes the new concept of hybrid philanthropy pioneered by the tech billionaires and the good work they are doing in challenging the traditional institutions of philanthropy. Imaginative giving by the new billionaires is beginning to transform philanthropy in terms of timing, involvement, strategy, and tactics. This development impacts society as a whole. Combining billions of dollars of their personal capital with new ideas, cutting-edge business-like techniques, media and marketing savvy, the tech benefactors profiled in this book are attacking some of the globe's most intractable societal problems. In trying to make a difference in the world, these new philanthropists, dubbed "philanthrocapitalists," seek to break down the traditional barriers dividing business, charity, and government.

The Privatization of Space Exploration

Business, Technology, Law and Policy

By unleashing entrepreneurial activity, Solomon writes, it may be possible to move the space program from the historic province of NASA and several giant aerospace firms and create a renaissance in human spaceflight. The private sector can energize the quest for space exploration and shape the race for the final frontier. Space entrepreneurs and private sector firms have already made significant innovations in space travel. They have plans for future tourism in space and safer shuttles. Solomon details current U.S. and international laws dealing with space use, settlement, and exploration. He then offers policy recommendations to facilitate privatization.

America's Water and Wastewater Crisis

The Role of Private Enterprise

America's Water and Wastewater Crisis presents a careful examination of how the water industry has operated in the U.S. in the past and how it may work as we move into the future. Solomon presents an historical overview of water supply and treatment needs over time and the role of the government, including how water policy has been crafted. He argues that water scarcity is becoming a major problem due to groundwater depletion, contamination, and patterns of consumption.

American Business and Public Policy

The Politics of Foreign Trade

Lewis Anthony Dexter,
Ithiel de Sola Pool, and
Raymond Bauer

This is a study of American politics and of international communication. Its subject is the ethos and actions of business executives when confronted by political issue-foreign trade legislation—with repercussions throughout the world as well as at home. This volume is one in a series that reports studies in several areas on communications and foreign policy. What distinguishes this research is an emphasis on the flow of communications to and within the groups involved in the foreign policy decision-making process.

Migrating Enterprise and Migrant Entrepreneurship

Stephan Raes

This study takes us from the history of the Dutch clothing industry in the nineteenth century, to the detailed description of migrants entrepreneurs in the sector, and the changes in trade patterns. Stephan Raes offers an elaborate multilevel theoretical framework to deal with the changes in the spatial organization of clothing supply. His analysis shows how large retailers have become the most powerful players in the Dutch clothing sector, and how the changes in the spatial pattern of clothing supply have to be understood against the changing logistics of their sourcing.

Monopoly Mail

Privatizing The United States
Postal Service

Douglas K. Adie

In this volume, Adie reviews the failures of the U.S. Postal Service—an inability to innovate, soaring labor costs, huge deficits, chronic inefficiency, and declining service standards. He blames most of these problems on the postal service's monopoly status. Competition produces efficiency and innovation; monopoly breeds inefficiency, high costs, and stagnation. Competition would give the Postal Service a chance to enter the twenty-first century as a modern, efficient company. It would also give American consumers a chance to have the kind of mail service that a modern economy demands.

COMPARATIVE POLICY EVALUATION

Ray C. Rist, Series Editor

Evaluating the Complex

NEW

Attribution, Contribution, and Beyond, *Volume 18*

Kim Forss, Mita Marra, and Robert Schwartz, editors

Evaluating the Complex is a conceptual framework and collection of case studies depicting how governmental and non-governmental organizations evaluate the success of complex policy initiatives. The chapters cover a wide variety of subjects, such as poverty, homelessness, smoking prevention, HIV/AIDS, and child labor. The use of case studies sheds light on the conceptual ideas at work in organizations addressing some of the world's largest and most varied problems.

Evaluation

NEW

Seeking Truth or Power?, *Volume 17*

Pearl Eliadis, Jan-Eric Furubo, and Steve Jacob, editors

Today most social and political observers would have difficulty imagining a society where evaluation is not a fixture of daily life, from individual programs to local authorities to parliamentary committees. While university researchers, grant makers and public servants may think there are too many types of evaluation, rankings, and reviews, evaluation is nonetheless viewed positively by the public. It is perceived as a tool for improvement and evaluators are seen as dedicated to using their knowledge for the benefit of society. The book examines the degree to which evaluators seek power for their own interests.

Mind the Gap

Perspectives on Policy Evaluation and the Social Sciences, *Volume 16*

Jos Vaessen and Frans L. Leeuw, editors

Mind the Gap has a two-fold aim. The first is to highlight and characterize the gap between evaluation practices and debates and the substantive knowledge debates within the social and behavioral sciences. The second is to show why this gap is problematic for the practice of evaluation while at the same time illustrating possible ways to build bridges. The book is centered on the value of producing useful evaluations grounded in social science theory and research.

The Evidence Book

Concepts, Generation, and use of Evidence, *Volume 15*

Olaf Rieper, Frans L. Leeuw, and Tom Ling, editors

Knowledge grows as ideas are tested against each other. Agreement is not resolved simply by naming concepts but in the dialectical process of thesis, antithesis, and synthesis. There are many echoes of these debates in *The Evidence Book*. The contributors make claims for both practitioner wisdom and the voice of experience. Against this is posed the authority of experimental science and the randomized controlled trial.

From Studies to Streams

Managing Evaluative Systems, *Volume 12*

Ray C. Rist and Nicoletta Stame, editors

Recent developments in the area of policy evaluation have focused on new notions of process notably, "influence." But this debate among evaluators on how evaluations are used has been essentially a closed one—evaluators talking only among themselves. The debate has gone on seemingly oblivious to fundamental changes in the intellectual landscape of public management, organizational theory, information technology, and knowledge management. New realities demand a different approach toward evaluation.

GLOBALIZATION IN THE 21ST CENTURY

Geopolitics

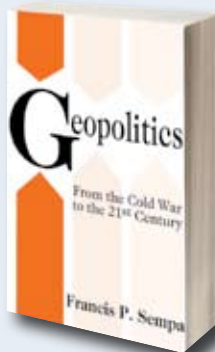

eBook

From the Cold War to the 21st Century

Francis P. Sempa

Writers, observers, and practitioners of international politics frequently invoke the term "geopolitics" to describe, explain, or analyze specific foreign policy issues and problems. Such generalized usage ignores the fact that geopolitics as a method of understanding international relations has a history that includes a common vocabulary, well-established if sometimes conflicting concepts, an extensive body of thought, and a recognized group of theorists and scholars. In *Geopolitics*, Sempa presents salient aspects of the history of geopolitical thought and applies its classical analyses to Cold War and post-Cold War international relations.

Resale Price Maintenance

A Comparative American-European Perspective

B. S. Yamey, editor

Resale Price Maintenance carefully examines all major and many minor issues over a wide range of trades and products that have been affected by resale price maintenance, and it provides fruitful analyses of various empirical studies that have been made on the restraint and/or advancement of commerce in Canada, the United States, Ireland, the United Kingdom, Sweden, and Denmark. Dealing with the practice in the constituent countries and also as it is affected by the emerging Common Market policy towards restraint on competition, the volume focuses on developments in public policy.

Policymaking under Adversity

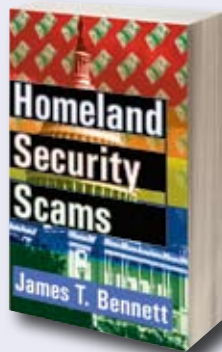

Yehezkel Dror

This groundbreaking study systematically treats recent policymaking trends, starting with a reconsideration of salient theoretical issues of policymaking and its study and culminating with a survey of current policy-related predicaments in various countries. Dror proposes that the task for social science research is to uncover underlying causes of policymaking inadequacies. In order to gain an understanding of pressing predicaments, he believes that policymakers need to examine the foundations of contemporary practices of present assumptions, and that they need a multiplicity of approaches to policymaking.

JAMES T. BENNETT

Homeland Security Scams

In *Homeland Security Scams*, James T. Bennett shows that this government spending is doing very little to make us safer, but a great deal to make us poorer, less free, and more dependent on the federal government. In this hard-hitting critique, Bennett argues that all

the spending and surveillance will not win the War on Terror or preserve us from natural disasters. He argues that we should view terrorism as just one of many other serious threats to individuals and to nations.

Tax-Funded Politics

Bennett argues that government agencies, far from being indifferent to self-aggrandizement and the consolidation of wealth and power, are concerned with their own self-interest, whether it is enhancing their budget or supporting a particular political agenda. Likewise, nonprofit entities claim to operate solely in the "public interest" but also engage in political advocacy and lobbying activities. But when charities do the lobbying, blatant self-interest is wrapped in the halo of the "public interest."

Democratizing the European Union

Issues for the Twenty-First Century

Catherine Hoskyns and Michael Newman, editors

Democratizing the European Union is essential reading for all those with an interest in the EU and broader questions of democracy. The contributors go beyond a primarily institutional approach by highlighting issues having to do with values, participation, and exclusion. Collectively this volume also transcends the limitations of abstract theory. Embracing a range of perspectives, and including discussions of major contemporary challenges, such as enlargement and economic and monetary union, this book contains a detailed analysis of the response of New Labour to the democratization debate.

The Willowbrook Wars

Bringing the Mentally Disabled into the Community

With Sheila M. Rothman
With a new afterword by the authors

The Willowbrook Wars is a dramatic and illuminating account of the effort to close down a scandal-ridden institution and return its 5,400 handicapped residents to communities in New York. The wars began in 1972 with Geraldo Rivera's televised raid on the Willowbrook State School. From 1975 to 1982, David and Sheila Rothman observed this remarkable chapter in American reform of mental disabilities care. *The Willowbrook Wars* takes us behind the scenes to clarify the role of the judiciary, the fate of the underprivileged, and the potential for social justice.

Strangers at the Bedside

A History of How Law and Bioethics Transformed Medical Decision Making

Beginning in the mid-1960s, the practice of medicine in the United States underwent a most remarkable—and thoroughly controversial—transformation. The discretion that the profession once enjoyed has been increasingly circumscribed, and now an almost bewildering number of parties and procedures participate in medical decision making. David J. Rothman gives us a brilliant, finely etched study of medical practice today in *Strangers at the Bedside*.

Christa Altenstetter

Medical technologies and devices are used ethically most of the time; yet they have the potential for unethical use when scientific medicine is elevated over human life and death. That is why our understanding of appropriate and effective regulation

of medical devices is significant to all people on all continents. The EU regulatory regime is one of three global regional regimes, and medical products manufactured in EU countries are sold worldwide. This volume on the regulation of medical devices in the European Union, with a focus on France, tackles a topic of interdisciplinary interest and significance for policymakers in countries around the globe.

 eBook

David G. Smith and Judith D. Moore

The authors make this story come alive for the reader by providing a strong connected narrative, detailed accounts of important policy changes, and extensive use of interviews with individuals close to events. Medicaid is a "weak entitlement," one less established or effectively defended than Medicare or Social Security, but more secure than welfare or food stamps. Medicaid has the flexibility to adapt (or be adapted) as well as a capacity to defend incremental and opportunistic gains. It has grown enormously since its inception to become the largest health insurance system in the country, a source of perennial complaint and, most recently, of continuing crisis.

Drugs and Decision-Making in European Union

Tim Boekhout van Solinge

This book gives an overview of the European Union's anti-drug measures and focuses on its decision-making process. It looks at why drugs have acquired a prominent position on the European political agenda and identifies the political function they serve in terms of domestic drug policy and international relations. This study shows that instead of solving the drug problem, the European Union's bureaucracy actually helps to keep it alive and well.

Comparative Perspectives

Mary Arnold, L. Vaughn Blankenship, and John Hess, editors

First published in 1971 by administrators of health agencies, teachers, and health personnel, this work presents perspectives on problems and interpretations of forces and issues that are of continuing importance to health administrators. The emphasis on the need to focus on the whole patient rather than just their illness, and on providing them with a good life, not just a disease free one, is still as valid today as it was when this volume was initially published.

Drugs, Law, and the State

**Harold H. Traver and
Mark S. Gaylord, editors**

Drugs, Law, and the State is based on the notion that drug control policy largely reflects the society in which it is found. The nine essays in this book, written by distinguished scholars from North America, Europe, and Asia, provide an in-depth examination of a number of socio-legal developments over the past decades. The contributors assume that modern drug control policies are explained best by theories that emphasize the role of ideology, legitimacy, and history.

The White Labyrinth

Cocaine and Political Power

Renssalaer Lee

The White Labyrinth explains why it is so difficult to take effective action against the cocaine problem. It looks closely at problems faced by producing countries: the economic and political pressures that make it so difficult to address the problem from a supply-side perspective. It analyzes the devastating pressure tactics of "coca lobbies" and cocaine trafficking syndicates. It explores the complex relationships between the cocaine industry and leftist revolutionary movements. *The White Labyrinth* is an in-depth examination of a problem that is of paramount public concern.

From Pathology to Politics

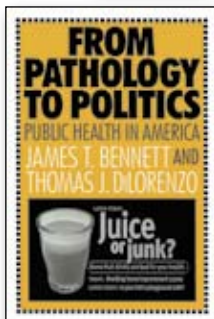

Public Health in America

**James T. Bennett and
Thomas DiLorenzo**

This vigorously argued analysis sees the public health movement as claiming expertise on virtually every social issue, from poverty to human rights. Bennett and DiLorenzo catalogue the "radicalization" of the public health movement by discussing its numerous political initiatives. They include case studies of the politicization of the public health movement in America. The authors reveal various methods of statistical manipulation that certain public health researchers use to "cook the data" in order to achieve politically correct results.

The Politics of Medicare

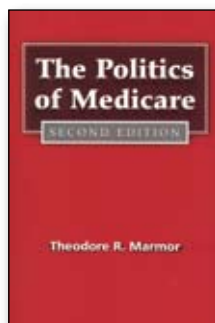

Second Edition

Theodore R. Marmor

"This new edition makes an extraordinary contribution to the literature of public policy and political science. The four entirely new chapters provide more content than in any standalone book I know on the topics covered. By treating the politics of Medicare as an exemplary, major initiative in public policy, this book provides invaluable insights for anyone interested in legislative initiatives, especially in domestic policy, but also in foreign affairs."

Snow Job?

The War Against International Cocaine Trafficking

Kevin Jack Riley

Snow Job? examines source country control policies—policies intended to control the production and export of cocaine from Latin America—and their limitations. The author disagrees with analysts who believe that source country control policies can lead to permanent victory, and suggests a better strategy would be one that recognizes the severe limits facing interdiction, eradication, and other source country policies, and instead focuses on directing source country resources where they will be most useful.

Entitlement Politics

Medicare and Medicaid, 1995-2001

David G. Smith

Entitlement Politics describes partisan attempts to shrink the size of government by targeting two major federal health care entitlements: Medicare and Medicaid. The more people and parties know about the history, politics, and policies of these programs, the better our prospects for devising workable, equitable, and lasting solutions. This volume leads the way toward that understanding.

The Punishment Response

Second Edition

Graeme Newman

*With a new introduction
by the author*

The Punishment Response describes the uses of punishment and how these uses change over time. Newman emphasizes that punishment is a cultural process and also a mechanism of particular institutions, of which criminal law is but one. Because academic discussions of punishment have been confined to legalistic preoccupations, much of the policy and justification of punishment have been based on discussions of extreme cases. The use of punishment in the sphere of crime is an extreme unto itself, since crime is a minor aspect of daily life. The uses of punishment, and the moral justifications for punishment within the family and school have rarely been considered, certainly not to the exhaustive extent that criminal law has been in this outstanding work.

Searching for Safety

Aaron Wildavsky

Nuclear power plants, new vaccines and drugs, pesticides designed to improve agricultural production, and a plethora of other technological advances hold great promise of improving the quality of human life, but also pose great risks to human well-being.

Protecting ourselves against the risks associated with these modern technologies has emerged as a major public concern throughout the industrialized world. *Searching for Safety* is unique in its exposition of a theory that explains how and why risk taking makes life safer. The book covers a wide range, including how the human body, as well as plants, animals, and insects, cope with danger. Wildavsky addresses the master dilemma head on, asking whether piling on safety measures actually improves safety.

Combating Piracy eBook

Intellectual Property Theft and Fraud

Jay S. Albanese, editor

In *Combating Piracy*, Jay S. Albanese and his contributors provide new analyses of intellectual property theft and how perpetrators innovate and adapt in response to shifting opportunities. Intellectual property theft includes stolen copyrights, trademarks, trade secrets, and patents, which represent the creative work of individuals for which others cannot claim credit. The contributors show that piracy is a form of fraud, a form of organized crime, a white-collar crime. This widespread fraud illustrates the global reach of the problem and the need for international remedies that include changed attitudes, public education, increasing the likelihood of apprehension, and reducing available opportunities.

Defining Danger

American Assassins and the New
Domestic Terrorists

James W. Clarke

There have been ten assassination attempts on nationally prominent political leaders. *Defining Danger* explores the cultural and psychological linkages that define assassinations and a new era of domestic terrorism in America. The volume conveys how individual acts of violence directed toward America's democratically elected leaders represent a defining element of American politics. It also reveals how danger is defined through an analysis of the motives and characteristics of perpetrators responsible for these acts of political violence.

Designing Denuclearization

An Interpretive Encyclopedia

Bruce D. Larkin

This work canvasses nuclear weapon abolition proposals placed on the table since 1945 and the obstacles and issues which a realistic program for abolition confronts today. It has an ambitious purpose, to show that nuclear abolition can and should be placed on the public agenda. The author terms it *interpretive* in that it incorporates his commentaries, never hiding his reasons and judgments. It is neither "just the facts" nor "all the facts." It is an encyclopedia in the original meaning of "a general course of instruction." He identifies himself with all who pursue the problem posed by nuclear weapons systematically and with seriousness of purpose, committed to self-instruction. In another sense, he writes, this work is a conversation with the reader.

City Politics and Planning

Francine Rabinovitz

This volume discusses some of the factors determining the political impact of the city planner on community decision-making. Rabinovitz bases her book on case studies of planning decisions in six New Jersey communities that were chosen for reputations of both effective and ineffective planning. She also uses a reanalysis of an attitude survey of U.S. planning directors, as well as a synthesis of previous studies. The materials are presented comparatively, thus enabling the reader to identify major themes in the broad and, until now, largely uncharted area of the interrelationship of politics and planning.

The Politics of American Foreign Aid

Michael Kent O'Leary

Adding a much-needed dimension to the discussion and analysis of United States foreign policy, O'Leary reveals the many complex factors that go into the making of American foreign aid policy. While placing the emphasis on the political system as a whole—its components, the relative power of actors in the system, and the manner in which they interact to create policy—a detailed and enlightening picture emerges of the attitudes of the general public, the political parties, the pressure groups, and Congress itself to the issue of foreign aid.

The Fiscal Crisis of the State

James O'Connor

*With a new introduction
by the author*

Fiscal Crisis of the State refers to the tendency of government expenditures to outpace revenues in the U.S. in the late 1960s and early 1970s, but its relevance to other countries of the period and also in today's global economy is evident. When government expenditure constitutes a larger and larger share of total economy theorists who ignore the impact of the state budget do so at their own (and capitalism's) peril. This volume examines how changes in tax rates and tax structure used to regulate private economic activity. O'Connor theorizes that particular expenditures and programs and the budget as a whole can be understood only in terms of power relationships within the private economy.

Rethinking the Income Gap

Paul Ryscavage

Ryscavage argues that we must reexamine what the income gap means. Its relevance as a measure of economic fairness has diminished significantly in recent years. Instead, the income gap is now linked to a variety of economic problems confronting the nation and used as a rhetorical device for stirring up social concern and advancing political agendas. *Rethinking the Income Gap* is overdue.

Political Elites in a Democracy

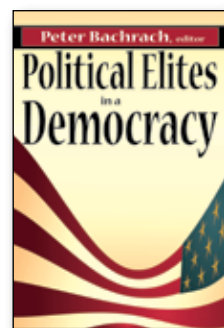

Peter Bachrach, editor

NEW

One of the potentially explosive issues of the modern era is a vast and growing disparity between the overwhelming predominance of elites in the decision-making process and the democratic ideal that people should participate in making decisions that vitally affect them. In this book an impressive array of political theorists offer conflicting views on the form of democratic elitism practiced in the United States.

On Thermonuclear War

Herman Kahn

*With a new introduction
by Evan Jones*

By the late 1950s, with both sides Hydrogen bomb-armed, reason and time were in short supply. Kahn, a military analyst at RAND since 1948, understood that a defense based only on thermonuclear armaments was inconceivable, morally

questionable, and not credible. Controversial when originally published, this book is iconoclastic, calm, and compellingly reasonable, and was widely read on both sides of the Iron Curtain. The result was serious revision in both Western and Soviet strategy and doctrine, avoiding disaster during the Cold War. The lessons and principles developed in *On Thermonuclear War* apply as much to today's China, Russia, Iran, and North Korea as they did to the Soviets.

Housing America

NEW

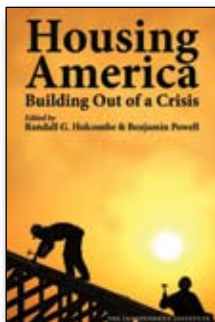

Building Out of a Crisis

eBook

**Randall G. Holcombe and
Benjamin W. Powell, editors**

This volume considers the effects of government housing policies and what can be done to make them work better. It shows that many problems are the result of government rules and regulations. Even in a time of foreclosures, the market can still do a crucial job of allocating resources, just as it does in other markets. Consequently, the appropriate policy response may well be to significantly reduce, not increase, government presence in housing markets. *Housing America* is a courageous and comprehensive effort to examine housing policies in the United States and to show how such policies affect the housing market.

The Challenge of Abolishing Nuclear Weapons

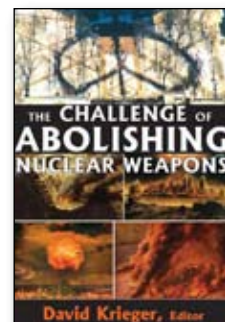

eBook

David Krieger, editor

NEW

In this remarkable collection, scholars and policy analysts argue that humankind has a choice: either allow nuclear weapons to continue to proliferate throughout the world or move toward their complete elimination. The vast majority of people on the planet would surely opt to abolish nuclear weapons. But decisions about nuclear weapons are not made by the public, but by small groups of political elites. The contributors to this volume provide historical perspective on nuclear weapons policy; explore the role of international law in furthering the prospects of nuclear weapons abolition; consider the obstacles to abolition; present a path to achieving a nuclear weapons-free world; and look beyond abolition to consider issues of post-abolition sovereignty and general and complete disarmament.

This volume describes family support and education programs, summarizes what is known about their effectiveness, and provides strategies and tools for family program developers and evaluators. It effectively bridges the gap between researchers and practitioners in order to bring practical, understandable advice to providers of family programs, and to program funders and policymakers. Because policymakers, program administrators, and informed citizens have come to rely more upon the results of evaluation research, we must improve our methods while not losing sight of its limitations.

The IQ Controversy, the Media and Public Policy

**Mark Snyderman and
Stanley Rothman**

The central question addressed in this book is why expert opinion and public views toward intelligence and its measurement are so widely divergent. The authors conclude that the public's view of the IQ controversy has been shaped by inaccurate media coverage; and, more importantly, by changes in the nature of American liberalism as well as the key role of civil rights issues in American life. The increasing influence of new strategic elites in the United States, and the changing role of the mass media, have profoundly affected the character of scientific information communicated to the general public and how it is communicated.

Bad Students, Not Bad Schools

NEW

Robert Weissberg

Why, despite this fiscal extravagance, are educational disappointments so widespread? In *Bad Students, Not Bad Schools*, Robert Weissberg argues that the answer is something everybody knows to be true but is afraid to say in public—America's educational woes too often reflect the demographic mix of students. Schools today are filled with millions of youngsters, too many of whom struggle with the English language or simply have mediocre intellectual ability. Their lackluster performances are probably impervious to the current reform prescriptions regardless of the remedy's ideological derivation. Weissberg argues that most of America's educational woes would vanish if indifferent, troublesome students were permitted to leave when they had absorbed as much as they could learn; they would quickly be replaced by learning-hungry students, including many new immigrants from other countries.

How Teaching to "Accept Differences" Undermines Civil Society

Robert Weissberg

"Weissberg (political science, emeritus, Univ. of Illinois-Urbana) attacks one of contemporary culture's most sacred articles of faith by questioning whether tolerance, as currently understood, is really a virtue in public education....Instead, Weissberg advocates a more traditional (and etymologically correct) view of tolerance that simply endures that which is odious and alien. Real tolerance is not pretending to like everything, but rather civilly putting up with the unfamiliar and uncomfortable....Highly recommended."

The Globalization of Terror

The Challenge of Al-Qaida and the Response of the International Community

eBook

Yoram Schweitzer and Shaul Shay
Preface by Meir Dagan

The terrorist destruction of the World Trade Center on September 11, 2001 was the climax of a course plotted by Osama Bin-Laden to bring about his apocalyptic vision of a decisive clash between the Western and Moslem worlds. The authors explore the background and objectives of the attacks, the elaborate planning that went into them, and the process of their practical execution. The importance of *The Globalization of Terror* lies in its precise analysis regarding the dimensions of danger international terror poses to the free world, and in its recommendations for the necessary strategy to prevent the recurrence of acts of large-scale terror.

Gender and Social Security Reform

What's Fair for Women?

While trying to adapt social security systems to the fiscal demands of aging societies, policymakers face the compelling challenge of how to design pension reforms that achieve fair outcomes for women. *Gender and Social Security Reform* examines how different countries are attempting to meet this challenge. Drawing on comparative studies of European and Latin American countries along with a series of case studies of individual countries, the book provides insights into the gender dimensions of alternative designs for reform.

Changing Patterns of Social Protection

With Rebecca A. Van Voorhis, editor

Over the last two decades, aging populations, changing family structures, market forces of globalization, strains of immigration, and political and ideological realignments have joined to create powerful pressures that are reshaping the design and philosophy of social welfare policies. *Changing Patterns of Social Protection* analyzes emerging patterns of social welfare and the implications of these trends for the future of social protection to vulnerable groups throughout the world. By clarifying alternative policy designs this work affords a fresh perspective on how to think about the changing structure and function of social welfare arrangements in modern society.

Connecting the Dots

Government, Community,
and Family

Peggy Wireman

"...an important, insightful, and provocative book that provides a clear blueprint for building stronger communities and families."

—Mark R. Rank,
Herbert S. Hadley
Professor of Social
Welfare,
Washington University

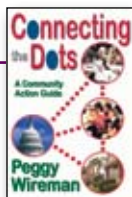

Connecting the Dots addresses the complex relationships between family and community, and between community and other players affecting family and community life, including the private sector, government, nonprofit groups, and religious organizations. Wireman argues that America does not suffer from a loss of family values, but from a shift in business practices and public commitments. The book includes bottom-up anecdotal examples to ground its policy-oriented discussion. Wireman provides a framework for policymakers, local community leaders, and neighborhood activists to use in analyzing their situations and selecting the best approach; she also describes what various players can and must do to uphold the American dream.

Citizens, Families, and Reform

Stein Ringen

*With a new introduction
by the author*

Modern families are economic institutions of grant productivity. They contribute as much to a society's economic well-being as does worker productivity in formal markets. In *Citizens, Families, and Reform*, Ringen shows how long-standing inequalities of income and class are flexible and changing in post-industrial societies. Such inequalities respond to structural changes such as social mobility and to public policies such as those of the welfare state. His book is a study of the process from careful statistical analysis to specific policy recommendations. His new introduction reviews the debates sparked by the book's original publication in 1997 and suggests areas in which his arguments have been vindicated.

Exporting Press Freedom

Craig LaMay

eBook

Exporting Press Freedom argues that the dilemma of media independence and sustainability is best understood as an economic problem rather than one of poor editorial standards or lack of will. It includes profiles of news and public affairs media in developing and democratizing countries, and also of two non-governmental organizations that have pioneered the use of low-interest loans in media assistance. These profiles exemplify strategic and entrepreneurial approaches to developing and supporting public service media. Such approaches may be of use not only in the developing world, but in the consolidated Western democracies as well, where concern has grown about poor journalistic performance and its consequences for democratic governance.

Hoodwinking the Nation

Julian L. Simon

Most people in the United States believe that our environment is getting dirtier, we are running out of natural resources, and population growth in the world is a burden and a threat. *Hoodwinking the Nation* discusses facts about population growth, natural resources, and the environment, and presents survey evidence of the public's view of these topics. The discrepancy between the facts and public beliefs sets up the puzzle that the remaining chapters attempt to explain. Simon explores how and why false bad news is produced, citing government reports as often being the basis for environmental news scams and doomsday analyses.

Questions of Universality,
Consciousness, and Connection

Felicity Laurence and
Olivier Urbain editors

Musical meanings are concerned with relationships, both with other human beings and with the world. This text moves far beyond the knowledge of music's power upon humans. It fuses a field of inquiry that is still a tiny endeavor, at least in comparison with all other academic efforts in the world. The sparseness of serious theoretical engagement with the topic of music and its social consequences is echoed by how little direct use of music for building a more humane consciousness exists in the "real world." Finding ways to that goal is the purpose of this work.

Ethical Transformations for a Sustainable Future

NEW

Olivier Urbain and Deva Temple,
editors

If the planet is to continue to be habitable for the myriad web of other creatures that make life possible, humans must transform their systems so that they are aligned with natural systems. The contributors to this volume believe that such transformations are urgently needed and possible, and they offer specific examples. They suggest solutions that call for new perspectives in our ethics, beliefs, traditions, economy, business, gender relations, education, and technology. They show that human beings have the power to implement changes in all natural and social environments.

UN Reform for 21st-Century
Challenges

Kevin Clements and Nadia Mizner,
editors

This work explores how the UN can establish global norms to reinforce a doctrine of internal and external political responsibility. How can the UN ensure that the interests of the peoples of the world receive equal attention as the interests of state parties? How does it deal with non-sovereign actors, not represented directly in the UN, who may command power and resources that are more significant than those available to nation states? How does it deal with state parties deemed ineffective, incapable, and illegitimate by their own citizens? How can the organization enhance its role with regional organizations? Finally, how will the UN ensure a positive and proactive role with respect to diverse global challenges in the early twenty-first century? This work is an essential guide to current discourse in the UN.

Majid Tehranian and

In the first decade of the twenty-first century, globalization and identity have emerged as the most critical challenges to world peace. This volume of *Peace and Policy* addresses the overarching question, "What are the effects of globalization in the areas of culture, ethnic diversity, religion, and citizenship, and how does terrorism help groups attain a sense of global identity?" The authors maintain that continuing efforts for dialogue across cultural and religious boundaries in today's interreligious and interfaith organizations can become a force for healing.

PERSPECTIVES ON DEMOCRATIZATION

Shirin M. Rai and Wyn P. Grant, *Series Editors*

Mainstreaming Gender, Democratizing the State

Institutional Mechanisms for the Advancement of Women

Shirin M. Rai, editor

Mainstreaming Gender, Democratizing the State reflects the commitment of the United Nations to promote mechanisms that aim to achieve equality between women and men. It identifies institutional mechanisms for the advancement of women, including national machineries, as one of twelve critical areas of concern. This volume illustrates that the ability of UN member states to subscribe to the agenda of equality between women and men has been significantly enhanced by the creation of these national-level institutions.

Climate Change and Environmental Ethics

NEW

Ved P. Nanda, editor

If humanity really faces dire consequences from global warming, why has there been such reluctance and resistance to do anything about it? *Climate Change and Environmental Ethics* explores this question with first-rate research and thinking of scholars from multiple disciplines—ethics, ecology, philosophy, economics, political science, history, and international law. This volume explores alternative ways of conceiving our relation to the natural world. A spirit of international cooperation and collaboration is needed to meet the challenge, and this book makes a substantial contribution toward that goal.

eBook

Rights and Obligations in Contemporary American Society

Howard L. Rosenthal and David J. Rothman, editors

This book includes essays by some of the finest social and political policy researchers in the United States. They address critical issues in contemporary American society. These range from the making of public opinion, the nature of the presumed social contract between the government and its people, the special place of corporate governance and institutional investors with respect to social stability, the search for educational equality in a world of growing income disparities, the huge run up in prison populations and the decline of American citizenship, and not least, the ethical issues of selfless and selfish motivations with respect to organ transplants and the sale of body parts. The volume is unified by the belief that ethical concerns play as large a role in defining American society as do economic interests.

Population Control **eBook**

Real Costs, Illusory Benefits

Steven W. Mosher

"In Population Control, Mr. Mosher incisively explores the history and effects of the population control movement from a pro-people perspective, based on the belief that because each person has unique value, more people means more for all of us—more economic production, more potential for artistic and scientific achievement, more innovation....his latest book should be read by all those who want to know why thriving human populations are reasons to rejoice rather than fear." —Joseph A. D'Agostino, *The Washington Times*

"...Mosher's book is an eye-opening, informative education tool that is worth a close examination by those who want to learn what is needed to reverse the rapid decline in population. Mosher argues that the United States government must stop funding population control measures. What the West needs to focus on is reversing the demographic suicide now taking place."

ENERGY AND ENVIRONMENT POLICY

Transforming Power

Energy as a Social Project

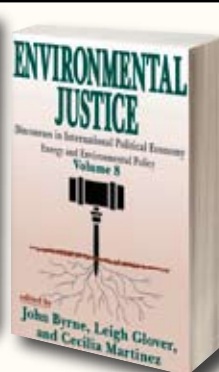

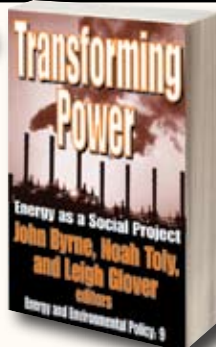

John Byrne, Noah Toly, and Leigh Glover, editors

Including theoretical inquiries and case studies by distinguished writers, *Transforming Power* is divided into three parts: Energy, Environment, and Society; The Politics of Conventional Energy; and The Politics of Sustainable Energy. It interrogates current energy assumptions, exploring the relationship between energy, environment, and society, and examining energy as a social project. Some of these projects have promised a prosperous future founded upon technological advances such as "inherently safe" nuclear power, environmentally friendly coal gasification, and fuel cells.

Governing the Atom

The Politics of Risk

John Byrne and Steve Hoffman, editors

Despite an extensive set of policy and institutional mechanisms to foster its use, nuclear technology is troubled by a wide range of problems and continues to pose risks many believe are far greater than society should accept. The legacy of failure ranges from catastrophic accidents like that at Chernobyl to the declaration of bankruptcy by the Washington Public Power Supply System. This volume explores why support for nuclear technology remains substantial, and provides a needed vehicle for the timely consultation and dissemination of current research on important energy policy issues.

This book marks an important contribution toward a greater recognition of the linkages between energy and environmental policies and problems of global environmental change.

Environmental Justice

Discourses in International Political Economy

Leigh Glover, John Byrne, and Cecilia Martinez, editors

The volume's authors consider the links between expanded patterns of environmental injustice and the structures and forces underlying and shaping the international political economy. *Environmental Justice* cannot be reduced to simple parables of indifference, prejudice, or appropriation. It forges understanding of environmental injustice as a development of international political economy itself. Likewise, initiatives on behalf of environmental justice are seen as elements of broader movements to secure self-determination in a globalizing world. *Environmental Justice* will be of interest to policymakers, energy and environmental experts, and all those interested in the environment and environmental law. It provides new perspectives on the place of environmental justice in international political and economic conflict.

Family and Child Well-Being after Welfare Reform

Douglas J. Besharov,
editor

This book explores how low-income children and their families are faring in the wake of welfare reform. When welfare reform was first debated, many people feared that it would hurt the poor, especially children. The contributors find little evidence to suggest this has occurred. As time limits and other programmatic requirements take hold, more information will be needed to assess the condition of low-income families after welfare reform. This informative volume establishes a baseline for that assessment.

Child Labour

Burning Questions

G. K. Lieten

The objectives of campaigns to reduce child labour seem simple and laudable but the issues involved are complex and questions must be answered: What actually is child labor, and what determines childhood? How many child laborers are there in the world? Is child labor restricted to developing countries or is it frequently used in order to stigmatize the non-Western world?

Family Foster Care in the Next Century

Kathy Barbell and Lois Wright,
editors

Despite federal mandates and funding, the child welfare system has continued to struggle to provide the level of services needed for children to reduce the amount of time children remain in temporary foster care. The Adoption and Safe Families Act, established unequivocally that safety, permanency, and well-being were national goals for children in the child welfare system. The central theme of this volume is accountability for outcomes, certainly a current driving force in child welfare as well as in other public and private service fields. This volume will be of interest to all concerned with the social welfare of children and families at the end of the twentieth century.

Beyond Common Sense shows why finding a place for well-being on the list of outcomes established to manage the child welfare system is not as easy as it first appears. Because policy should be evidence-based, the available evidence to support well-being as a primary goal is a focus of this book. Also, because policymakers have to make decisions that allocate resources, a basic understanding of incidence in the public health tradition is essential, as is evidence that speaks to the question of what works clinically.

The War Between the State and the Family

How Government Divides and
Impoverishes

Patricia Morgan

Patricia Morgan asserts, based on economic analysis, that over the last twenty-five years the family has been seriously undermined as the state provided significant support for dependents who are not brought up within self-sustaining family units, and as it provided services, such as childcare, that are generally provided within families. Tax and benefit systems seem to be important determinants of family structure worldwide. She suggests policy solutions: The state can best support the family by not taxing the family heavily, and by minimizing the subsidization of those who choose alternatives to financially self-sustaining family life. She suggests that divorce laws should be reformed to ensure that those who make commitments are held financially responsible.

Policy, Politics, and the Homeless

**James D. Wright, Beth Rubin, and

James Wright's *Address Unknown: The Homeless in America* focused on the problem of homelessness during the mid-to-late 1980s, making an important contribution to the then-emerging public debate of a rapidly growing and increasingly visible social problem. *Beside the Golden Door* updates the story and our knowledge of homelessness through the middle 1990s, advancing the thesis that an emphasis on factors such as mental illness or substance abuse is descriptively accurate but fails as a causal account of the rise of homelessness as a social problem.

Social Policy and Social Work

Critical Essays on the Welfare State
Second Edition

Robert Moroney and Judy Krysiak

The first edition examined the perceived dichotomy between two major approaches to social welfare—the institutional and residual models—arguing that the former assumes a sense of community while the latter is concerned with the extension of rights to the individual. In expanding this argument Moroney and Krysiak incorporate notions of citizenship, suggesting that elements of both approaches can be integrated in such a way that the modified framework attempts to deal with critics from both sides. Current data are presented in each of the original chapters and two new chapters cover the areas of health and employment.

The Possibility of Politics

A Study in the Political Economy of the Welfare State

Stein Ringen

*With a new introduction
by the author*

The Possibility of Politics views the welfare state as a large-scale experiment in political reform. To ask if the welfare state works is to ask if political reform is possible at all. By its nature, the welfare state is reform on a grand scale, for it attempts

to change the circumstances individuals and families live under without changing and disrupting society itself. Ringen considers how well redistribution has met the test in terms of political legitimacy, its intended effects on poverty and inequality, as well as its undesired and unintended effects on economic efficiency and the quality of private life. Ultimately, does the welfare state work?

Fractured Generations

Crafting a Family Policy for Twenty-First Century America

Allan Carlson

"Fractured Generations is an insightful and provocative account of the history and future of family policy in the United States. Written by one of the wisest observers of the family in America, this book offers timely analyses of topics such as social security, income tax policy, and family planning. This book is required reading for academics, journalists, and policymakers interested in the family."

—W. Bradford Wilcox,
University of Virginia; author of
*Soft Patriarchs, New Men: How
Christianity Shapes Fathers and Husbands*

As early as the 1840s, certain elements of states' policies hinted at a weakening family structure, but not until the 1960s was the family openly attacked. Contemporary family policy represents an attempt to counter the negative forces of the last four decades so as to restore the natural family to its necessary place in American life. *Fractured Generations* follows the life-course of the human family—marriage; the birth of children; infant and toddler care; schooling; building a home; crafting a durable family economy; and elder care.

The Swedish Experiment in Family Politics

The Myrdals and the Interwar Population

Allan Carlson

This devastating account of the work of Gunnar and Alva Myrdal is a monumental case study in the uses and abuses of social science. The author uses interviews with many of the figures involved and extensive archival research to weave an uncommonly personal account of triumphant social engineering.

Poverty Policy

A Compendium of Cash Transfer Proposals

Theodore R. Marmor, editor

Cash transfers are but one form of income supplementation, and a fuller presentation of anti-poverty proposals would include both transfers in-kind (such as food, housing, and medical care) and human investment programs aimed at increasing the earning capacity of individuals. Much discussion has centered on how to reduce poverty by getting more cash income in the hands of poor people. This collection brings together in one accessible volume the most widely discussed plans for reducing financial poverty in the United States through cash transfers.

Making Welfare Work

Reconstructing Welfare for the Millennium

Frank Field

"Frank Field's *Making Welfare Work* is a clear example of the British Labour Party's understanding of Third Way political thought. A member of Parliament, Field provides the reader with a plethora of practical reasons why the British polity must take on the challenges of welfare reform.... Indeed, the book's main strength is its philosophical dimension."
